Welcome to Naples

It is my great pleasure to welcome you to Naples for the Minimally Invasive Ortho-Facial Surgery Summit. As Chairman of this congress, it is an honor to greet colleagues, friends, and professionals from all over the world, gathered here to share insights, experiences, and innovations in a field undergoing extraordinary transformation.

Orthognathic and facial surgery today are evolving at an exceptionally rapid pace. We live in an era marked by unprecedented digital and technological progress—an era in which innovation is not just an added value but a necessity. It is essential for surgeons to keep pace with these advancements, embracing tools, techniques, and approaches that reflect the level of excellence our patients expect.

Like many other surgical disciplines, orthognathic surgery is moving toward minimally invasive and low-impact techniques, with the goal of ensuring a safer, faster, and less traumatic postoperative recovery. Our shared commitment is to allow patients to return to their daily lives as quickly as possible, without compromising precision or quality.

This congress brings together leading experts from around the world, pioneers not only in orthognathic surgery but in the entire field of facial surgery, masterfully integrating both functional and aesthetic dimensions in the management of facial deformities. Alongside these esteemed masters, we are pleased to welcome international Next Gen speakers who represent the rising stars of the field—talented clinicians and researchers who are already shaping the future of our discipline.

Our aim is to offer a unique opportunity for growth, exchange, and inspiration: a dialogue between those who have written, those who are writing, and those who will write the future of ortho-facial surgery.

Welcome to Naples, and I wish you all an excellent congress.

Prof. Giovanni Dell'Aversana Orabona

Congress Chairman
